Piraeus, Greece | apostoloslagwnikas@gmail.com | +30 6978226516 | [GitHub](#) | [Portfolio](#)

Profile

Full-Stack Developer with hands-on experience delivering web applications, content management solutions, and system integrations across multiple client projects. Proficient in building end-to-end solutions spanning front-end interfaces, back-end logic, REST APIs, and CMS platforms. Proven ability to automate complex workflows, perform large-scale data migrations, and integrate third-party tools such as analytics, consent management, and SEO systems. Passionate about clean architecture, modern tooling, and continuous improvement.

Technical Skills

Languages: C#, JavaScript, TypeScript, Python, Dart, PHP, SQL, C, C++

Frameworks & Libraries: React, Flutter, Node.js, Express, Vite, Razor, Firebase

Databases & APIs: SQL, MongoDB, Firestore, RESTful APIs

Platforms & Tools: Umbraco CMS, .NET, Git, npm, Webpack, WordPress, Linux, Windows

Professional Experience

Software Engineer

September 2025 – Present

REDIRECT | Remote / Hybrid

CMS Development & Client Delivery:

- Built and maintained multi-site solutions on Umbraco CMS, delivering department pages, staff rosters, and structured content updates for hospital clients.
- Performed major CMS version upgrades, migrating deprecated property editors and adapting custom components to current Umbraco standards.

Automation & Data Migration:

- Developed a C# automation script that replicated and restructured several hundred CMS page nodes, reducing a multi-week manual effort to a matter of hours.
- Implemented uSync-based content synchronization workflows between development and production environments.

Full-Stack Development & DevOps:

- Developed and maintained full-stack web features spanning Razor/C# back-end logic, REST API consumption, and JavaScript front-end implementations.
- Managed deployment workflows using Git, including environment-based configuration, branch strategies, and release coordination across development and production.
- Automated build and deployment pipelines (GitHub Actions) for static front-end projects, and maintained server-side environments on both Windows (IIS) and Linux hosts.

Projects

Dynamic Resource Management Engine • NestJS, TypeScript, React, PostgreSQL, Prisma |

github.com/otolis/DynamicResourceManagementEngine

- Designed and built a multi-tenant ERP / Project Management platform on a meta-schema (EAV) architecture, allowing organizations to define entities, custom fields, state-machine workflows, and role-based access control at runtime — without code changes or database migrations.
- Implemented a modular backend in NestJS with Prisma over PostgreSQL, and a dynamic React front end that renders forms and tables from runtime schema definitions.

CMS Migration Tool • C#, .NET, uSync, XML, Web Scraping

- Engineered a tool to convert content from multiple CMS platforms into structured, import-ready packages for Umbraco, significantly reducing manual migration effort on client projects.
- Implemented a multi-module architecture covering content parsing, field mapping, export generation, and live site scraping for content recovery.

Focus Forge • *Flutter, Dart, Riverpod, Supabase, Groq LLM, REST API* | github.com/otolis/FocusForge

- Developed a cross-platform mobile productivity app combining task management, habit tracking, and AI-powered daily planning that parses natural-language tasks and generates adaptive schedules.
- Implemented state management with Riverpod and real-time cloud sync via Supabase; tested on physical Android devices.

Fraud Detection Using ML • *Python, scikit-learn, pandas, Streamlit, Jupyter* | github.com/otolis/fraudDetectionUsingML

- Built a fraud detection system on a 6.3M-row imbalanced financial transactions dataset (0.13% fraud rate), engineering balance-difference features that captured discrepancies between transaction amounts and actual balance changes.
- Trained and compared Logistic Regression and Random Forest classifiers in a scikit-learn pipeline; improved fraud F1-score from 0.04 to 0.88 by switching algorithms and using class-weight balancing.
- Deployed both models behind a Streamlit web app that accepts transaction details and returns side-by-side predictions from each classifier.

Education

Bachelor's Degree – Software Development

October 2024 – Present

Hellenic Open University (Remote)

Bachelor's Degree – Web Development

October 2023 – June 2025

IEK DELTA 360

Certifications & Licenses

ECCE (Michigan Lower)

Level B2 English language certificate

FCE (Cambridge Lower)

Level B2 English language certificate
